EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Elliott D. Light on 11/10/2008.

The application has been amended as follows:

2. (Currently Amended) A method of operating a data-processing device with an integrated circuit comprising ~~one~~ two or more processors in which the integrated circuit performs cryptographic operations, the method comprising:

performing cryptographic operations in the integrated circuit, wherein at least two ~~of the one or more~~ processors perform the cryptographic operations simultaneously and in parallel,

wherein the cryptographic operations of at least one ~~of the one or more processors~~ processor are useful operations and the cryptographic operations performed by at least one other processor are dummy operations whose results are rejected, and wherein the selection as to which of the ~~one~~ two or more processors performs a useful operation is randomly controlled, and

wherein consumption characteristics of the data-processing device being a superimposition of consumption characteristics associated with performing both useful and rejected cryptographic operations, whereby reconstruction of the consumption characteristics associated with performing any of the useful cryptographic operations is impeded.

3. (Currently Amended) A method as claimed in claim 2, wherein the ~~one~~ two or more processors comprise a CPU and at least one co-processor.

10. (Currently Amended) A data-processing device with an integrated circuit, comprising:

~~one~~ two or more processors,

a control unit which controls the ~~one~~ two or more processors so that, in the case of a cryptographic operation, ~~the one or more processors perform~~ at least one processor performs a cryptographic operation simultaneously and in parallel with the performance of a ~~with at least one dummy operation by at least one other processor~~, and wherein the selection as to which of the ~~one~~ two or more processors performs a useful operation is randomly controlled,

whereby consumption characteristics associated with performing the respective cryptographic and dummy operations are superimposed so that reconstruction of the consumption characteristics associated with performing the cryptographic operation is impeded.

13. (Currently Amended) A data-processing device as claimed in claim 12, wherein the recombiner rejects the relevant result of the at least one processor ~~of the one or more processors~~ that performed such dummy operation.

14. (Currently Amended) A data-processing device as claimed in claim 10, wherein the ~~one~~ two or more processors comprise a CPU and at least one co-processor.

The following is an examiner's statement of reasons for allowance. The present invention is directed to a method for performing cryptographic operations using two or more processors in an integrated circuit wherein at least two processors perform the cryptographic operations simultaneously and in parallel, wherein the cryptographic operations of at least one processor are useful operations and the cryptographic operations performed by at least one other processor are dummy operations whose results are rejected. More specifically, independent claims 2 and 10 identify the uniquely distinct features: wherein the selection as to which of the two or more processors performs a useful operation is randomly controlled. The closest prior art includes: (i) Patarin et al. (6,658,569) discloses two or more processors performing useful cryptographic operations simultaneously and in parallel; and (ii) Jahnich et al. (6,725,374) discloses using dummy operations which cause additional advantageous current fluctuation to be observed in a PDA analysis. The prior art, taken either singly or in combination, fails to anticipate or fairly suggest the limitations of applicant's independent claim, in such a manner that a rejection under 35 U.S.C 102 or 103 would be proper. The claimed invention is therefore considered to be in condition for allowance as being novel and nonobvious over prior art.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to MINH DINH whose telephone number is (571)272-3802. The examiner can normally be reached on Mon-Fri: 10:00am-6:30pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gilberto Barron can be reached on 571-272-3799. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
